

## Guides to complete

- 6-5\_insertAdapter\_Users\_Guide (Chapter 1-5)

## Practical's

## Exercise 6a – Adapters(Insert)

### Key skills

*Creation of Adapter for insert*

*10 minutes*

### Task

Creating of adapter for insert

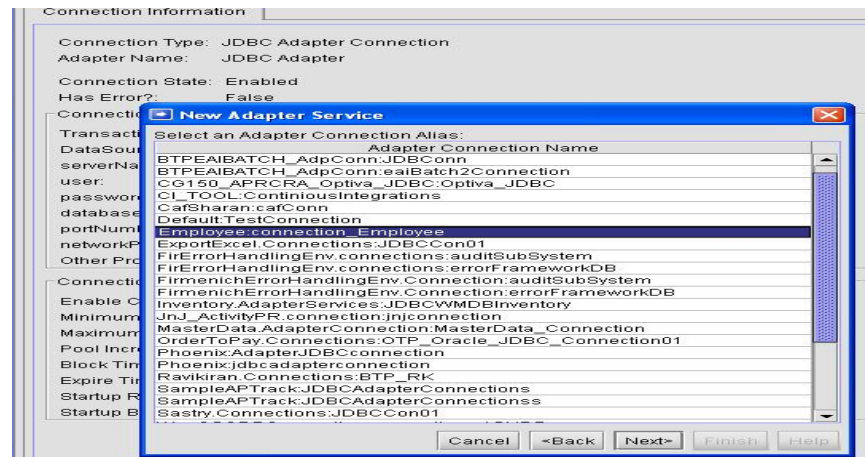

- In the work sub folder,create adapter **insertEmployeeInfo**
- Use the flow service **employeeInfoService** to insert data with the help of adapter
- Run it(provide your own input data) and test.

## Create an adapter service (Template – INSERT) for the table EMPLOYEE INFO

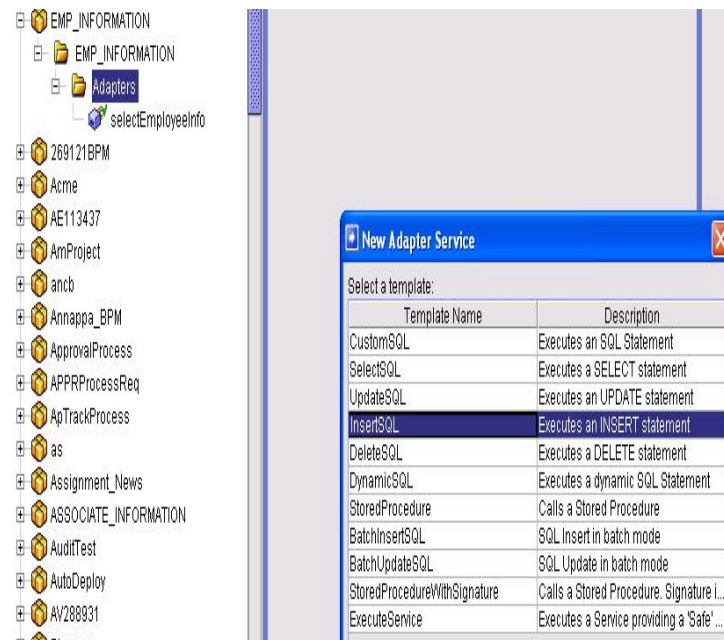

- Select an adapter type i, e JDBC adapter and click on NEXT

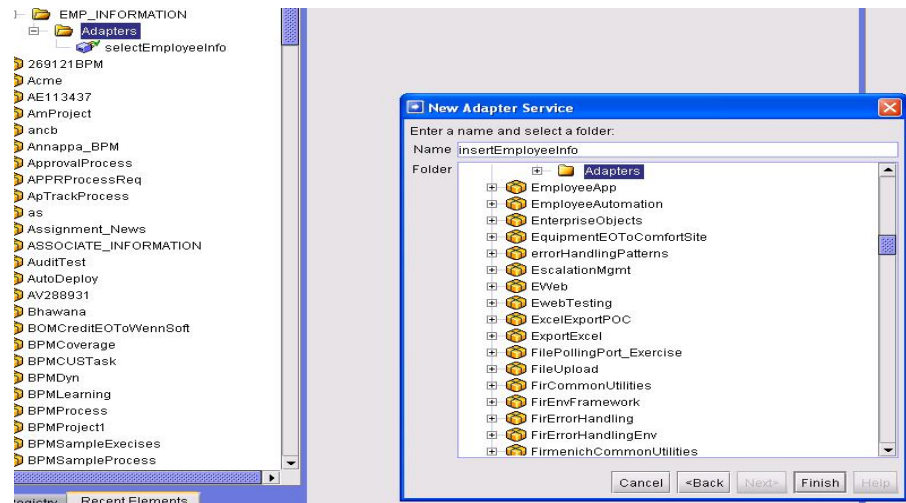

- Select an Adapter Connection Name and click on NEXT

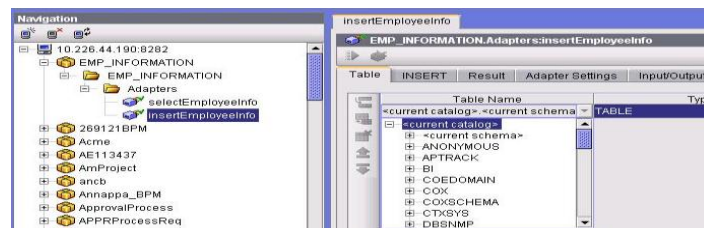

- Select a template->Insert

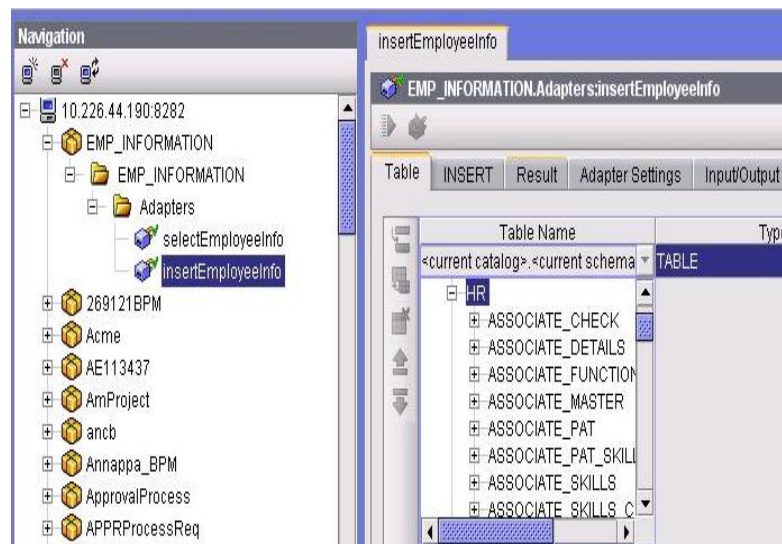

- Select a folder and enter a name for an adapter service and click on FINISH

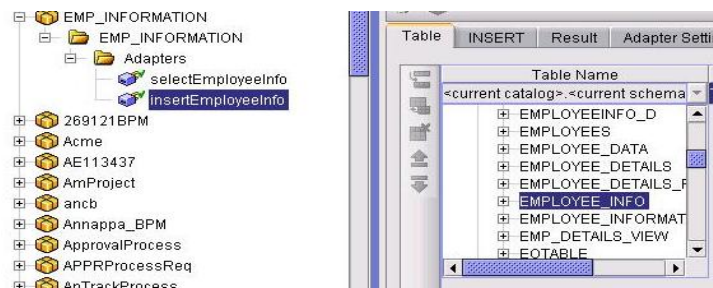

- Select the table name under HR schema.table name is EMPLOYEE\_INFO

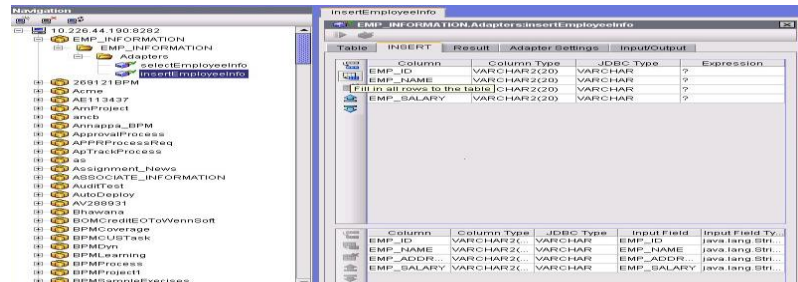

- Select the HR schema

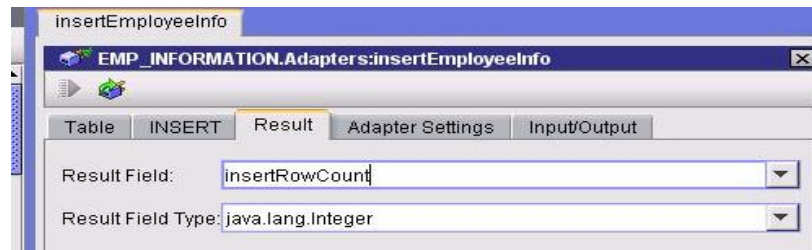

- Select the table name EMPLOYEE\_INFO

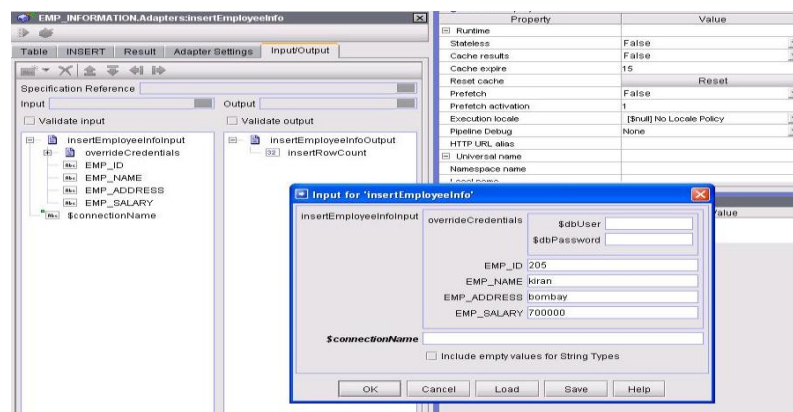

- Fill in all rows to the table

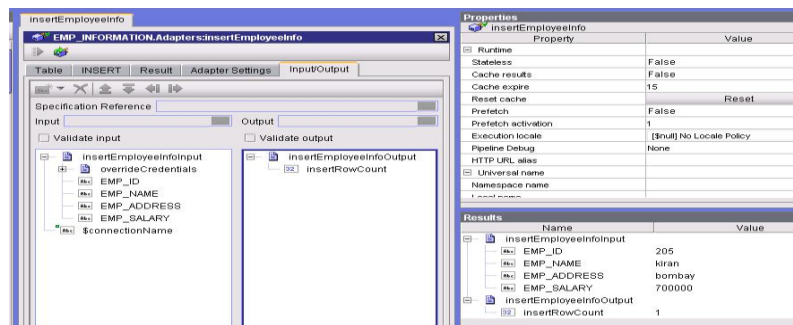

- Mention the insertRowCount in the result field

- Save it and run the adapter service by inserting values and click on Ok

- It shows the result field by adding the values in the table and shows the insertRowCount

## Creating flow service for INSERT

- Add transaction parameters start transaction(pub->art->transaction->start transaction) and commit transaction(pub->art->transaction->commit transaction) and rollback transaction(pub->art->transaction->rollback transaction)
- Flow service for inserting records in the Employee table
